Benefits of working with SITech:

- Highly skilled management team with more than 10 years of successful operational experience in the global IT-market
- Over 350 successfully accomplished projects for U.S.-based clients
- Critical mass of resources - 49 skilled core professionals dedicated to the customer's success
- Price competitiveness
- Application of the most recent technologies
- Delivering on time and within the budget

Services

SiTech professionals offer a unique combination of research and development skills that ensure the successful implementation of any complex project within your company. Drawing on our years of industry experience allows us to give accurate upfront estimates and produce sophisticated software systems within schedule and budget.

At SiTech, we have a proven track record for excellence and reliability in delivering quality solutions and services to the customer based on our ability to effectively manage all aspects related to multifaceted projects. The areas of our main expertise:

Content Management Solutions for global Networks and Intranet

SiTech has developed its own powerful framework — GIG (Global Information Grid) - that enables organizations to manage vast amounts of information and drastically cut through the paperwork barriers to productivity. In addition to its main functions, this framework supports automation of such complex business processes as subscription management and Royalty Tracking.

Our Content Management Solutions may include:

- Storing and organizing content elements (Indexing content, Meta data storage and indexing, links to and controls for external content sources, etc.);
- Product Definition (by means of data aggregation);
- Knowledge Exchange Component (allows users to share their value and knowledge with one another);
- Subscription Management;
- Royalty Tracking.

Royalty Tracking System

SITech has built the most advanced Royalty Tracking System among the existing ones in the world. The system performs tracking and accounting of royalties for materials used in published products and creates printed and/or electronic reports on a regular basis.

Every year, this system is able to save your company significant amount of royalties by its ability to calculate precise payment calculations according to specific conditions of license agreements with copyrights holders. In addition, our Royalty Tracking System provides powerful tools for analysis of the relation between the company's income from product distribution, and royalties for materials included in those products. Also, the system allows income and payments trend analysis to be performed. Built on standard technology our Royalty Tracking System is capable of being installed and interfacing with all of your existing systems.

E-Learning applications / Multimedia streamed over the Web

Our Multimedia Unit provides a broad range of services from conceptualization of a new idea through development and production of a complete application. We have created over 20 high-quality multimedia applications, from engaging and persuasive multimedia presentations to interactive children's stories and learning tutorials for high-tech companies.
